Botanical Name and Family: *Cinnamomum verum*, Lauraceae family.

CAS: 8007-80-5

Description: 50% CINNAMON Essential Oil 50% Maltose/Modified Starch

Oil Extraction Process: Cinnamon Oil is typically obtained through steam distillation of the inner bark of cinnamon tree. The steam carries the volatile compounds from the bark, which are then condensed to obtain the oil.

Characteristics: Cinnamon Oil has a warm, sweet, and spicy aroma. It is a pale yellow to brownish liquid with a medium to thick consistency.

Active Compounds: The main active compound in cinnamon oil is cinnamaldehyde, which is responsible for its characteristic aroma and potential therapeutic effects. Other compounds present include eugenol, linalool, and cinnamyl acetate.

Cinnamomum verum is an evergreen tree native to Sri Lanka and southern India. It has oval-shaped leaves, and the bark of the tree is used to extract cinnamon oil.

Traditional Applications: Cinnamon has a long history of use in traditional medicine and culinary applications. It has been valued for its potential antibacterial, antifungal, antiviral, and anti-inflammatory properties. It has been used to support digestion, relieve respiratory congestion, and promote overall well-being.

Commercial Applications: Cinnamon Oil Powder is widely used in the food and beverage industry as a flavoring agent. It is also used in the production of confectionery, baked goods, and various culinary preparations. Additionally, it is used in the fragrance industry for its warm and comforting scent.

Aromatherapy Applications: In aromatherapy, Cinnamon Oil is known for its energizing and invigorating properties. It is believed to stimulate the senses, promote feelings of warmth and comfort, and enhance mental focus. It is often used in blends for diffusers, massage oils, and room sprays.
