Botanical Name and Family: *Petroselinum crispum*, Apiaceae (Umbelliferae) family.

CAS No: 8000-68-8

Description: 50% PARSLEY SEED Essential Oil 50% Modified Starch

Oil Extraction Process: Parsley Seed Oil is typically obtained through steam distillation of the dried seeds of the parsley plant. The seeds are crushed to release the essential oil.

Characteristics: Parsley Seed Oil Powder has a fresh, herbaceous, and slightly spicy aroma.

Active Compounds: The main constituents of Parsley Seed Oil include apiole, myristicin, limonene, and various other terpenes. These compounds contribute to its aromatic and potentially beneficial properties.

The parsley plant is a biennial herb that is widely cultivated for its culinary and medicinal uses. It has bright green, feather-like leaves and produces small flowers that develop into seeds.

Traditional Uses: Parsley has a long history of use in traditional medicine and culinary applications. It is known for its antioxidant properties and has been used to support digestion, promote urinary tract health, freshen breath, and support overall wellness.

Commercial Uses: Parsley Seed Oil Powder is primarily used in the fragrance and flavor industries. It is often employed as a flavoring agent in food and beverages, as well as in perfumes and cosmetics for its pleasant scent.

Aromatherapy Uses: In aromatherapy, Parsley Seed Oil Powder is sometimes used for its stimulating and energizing properties. It may be used in diffusers or added to massage oils or bath products to promote a sense of vitality and rejuvenation.
